PROFESSIONAL EXPERIENCE

PROFESSIONAL SUMMARY

Software Engineer with 4+ years of experience developing and maintaining production-grade web and mobile applications across banking, fintech, manufacturing, and enterprise environments. Experienced in building scalable backend services using Laravel and Spring Boot, developing Android and Flutter applications, and delivering end-to-end solutions from system design to deployment. Contributed to systems supporting over 100,000 virtual accounts, enterprise HR platforms used by multiple financial institutions, and internal customs-compliant inventory systems. Experienced in designing RESTful APIs, integrating enterprise systems, and building scalable software using both monolithic and microservices architectures.

IT & Logistics Staff | PT Tiara Indoprima | Bandung, Indonesia **Sept 2024 – Present**

Led the development of an internal IT Inventory web application to manage and report import-export activities to the Directorate General of Customs, enhancing operational efficiency and compliance.

Selected Project Experience

- TIP - IT Inventory (Professional Project)
  - Designed and implemented a complex backend architecture using Laravel (monolith) with Blade templating for server-side rendering.
  - Deployed and configured the application on an internal Ubuntu-based server with Apache.
  - Automated recording and reporting processes, reducing manual errors and improving audit readiness.
  - Conducted periodic system maintenance to ensure compliance with evolving customs regulations.
  - The system has processed over 100 import transactions, 150 export transactions, 100 local shipments, and 30 waste management operations.
  - Managed inventory data for 200+ types of raw materials and 150+ types of finished goods.

Mobile Developer | PT Digital Amore Kriyanesia | Bandung, Indonesia **Sept 2021 – Aug 2024**

Contributed and led the development of multiple high-impact mobile applications for Yogyakarta Regional Development Bank and several Rural Banks (Bank Perkreditan Rakyat) in Indonesia, focusing on financial services and merchant solutions.

Selected Project Experience

- Raharjo (Professional Project)
  - Led the mobile development team, implementing Kotlin with a high-scalability MVVM architecture.
  - Served 500+ active merchants, recording hundreds to thousands of transactions daily.
  - Designed reusable Material Design component architecture reducing UI implementation time across future modules.
  - Integrated secure API communication using Retrofit.
  - Implemented Firebase for push notifications and Bluetooth printer (ESC/POS) support for receipts.
  - Enabled key merchant features including transaction receipt checks, creation of sub-cashier accounts, QR code scanning for cashless transactions, and transaction returns.
- Mollect (Professional Project)
  - Deployed the application to two Rural Banks (BPR): BPR Pijer Podi and BPR Madani Sejahtera Abadi.
  - Delivered a mobile application used daily by more than 100 Account Officers serving over 2,000 customers.
  - Processed and reported tens of thousands of customer payment records through the mobile collection system.
  - Integrated ESC/POS Bluetooth printing to enable instant receipt generation and streamline field payment workflows.
  - Implemented Firebase for push notifications to improve operational efficiency.
  - Applied MVVM architecture for maintainability and scalability.

Fullstack Developer | PT Digital Amore Kriyanesia | Bandung, Indonesia **Sept 2021 – Aug 2024**

Contributed significantly to the development of enterprise-scale applications using Laravel (monolithic architecture), focusing on robust backend systems, interactive frontend interfaces, and seamless system integration.

Selected Project Experience

- Virtual Account (Professional Project)
  - Developed backend system consisting of two specialized microservices: Virtual Account Service and Product Service, fully integrated with BPD DIY's core banking system, using Java Spring Boot with Maven.
  - Managed Virtual Account Service covering VA creation (main VA and sub-VA), transactions such as disbursement, cash pooling, transactional fee handling, withdrawal, and deposit.
  - Managed Product Service enabling configuration of transactional fees, transaction limits, and other VA-related parameters per bank product.
  - Contributed to backend services supporting 100K+ active virtual accounts and millions of transaction records.
- Human Resource Information System (HRIS) (Professional Project)
  - Successfully deployed to 11 BPRs, managing HR operations for 600+ employees across different institutions.
  - Handled core HR processes including leave management, attendance tracking, permissions, reimbursements, and business travel requests.
  - Calculated and processed payroll for 50+ monthly payroll periods, each with institution-specific rules.
  - Implemented Mailjet for secure in-app mailing services.
  - Developed secure, user-friendly RESTful APIs for mobile access to HR functionalities.
  - Encrypted application source code using Bolt to ensure deployment security.

EDUCATION

Indonesian University of Information Technology and Business (UNIBI) **Bandung, Indonesia**
Bachelor of Informatics Engineering - **GPA : 3.59** 2022 - Feb 2026

Assalaam Vocational High School Bandung **Bandung, Indonesia**
Software Engineering Major 2018 – 2021

ADDITIONAL INFORMATION

- **Programming Languages:** PHP, Java, Kotlin, Dart, JavaScript, TypeScript
- **Frameworks:** Laravel, Spring Boot, Flutter, Next.js
- **Database Management:** MySQL, PostgreSQL, MongoDB
- **DevOps:** Docker, GitHub Actions, GitLab CI
- **Payment Gateway Integration:** Flip, Xendit, Midtrans
- **Tools:** Git, Firebase, Sentry, Apache, Nginx
- **Architecture:** REST API, Microservices, Monolith
- **Language:** English (Professional Working Proficiency), Bahasa Indonesia (Native)
